Note: there may be more constant terms such as an immutable container containing only constant elements. Please update the *constant* rule if you know such terms.

2 Transformation Rule for TensorFlow ML Training Code

2.1 Restrictions

1. All import statements must be placed at the top of a module.
2. The `tensorflow` module must be assigned to a variable only using an import statement.
3. Members of the `tensorflow` module must not be aliased.
4. `print` function call expressions must not introduce side-effects.
5. A dataset and an optimizer object must only be created once via an assignment statement with a function call expression and must not be aliased.
6. Variables storing a dataset or a optimizer object must not be reassigned to store another value that is not a dataset or an optimizer object.
7. A dataset and an optimizer object must not be created conditionally.
8. `optimizer.apply_gradients` function call expressions must be expression statements or a direct RHS of an assignment statement.
9. Global variables storing an `optimizer` object and referred in functions must be defined before the functions' definitions and must not be changed after their initializations.
10. A checkpoint object must only be created once via an assignment statement with a function call expression and must not be aliased.

2.2 Rules

2.2.1 Types and Auxiliary Functions

τ	::=	$Module$	(Modules)
		$Stmt$	(Statements)
		$Expr$	(Expressions)
		$Comprehension$	(Comprehensions)
		$ExcHandler$	(Exception handlers)
		$Alias$	(Aliases)
		$WithItem$	(Withitems)
		$Pattern$	(Patterns)
		Id	(Identifiers)
		Str	(Strings)
		τ list	(List of elements typed τ)

$\sigma \in \Sigma = Str \xrightarrow{\text{fin}} Id$ Environment storing mappings from strings to identifiers

._1	:	$\tau \times \tau \to \tau$	Get the first element of the given pair
@	:	τ list $\to \tau$ list $\to \tau$ list	Concatenate two lists
::	:	$\tau \to \tau$ list $\to \tau$ list	Append an element to a list (right-associative)
<:	:	$Expr \times Expr \to \mathbb{B}$	Whether classes specified by the expressions are subclasses

2.3 Rule: TensorFlow 2.x Keras API Pattern

3 Identifying trainig loop

3.1 Restrictions

1. Training loop must be defined in only one file.
2. Training loop type is either `distributed gradient tape` or `distributed optimizer`.
3. Each model must have only one type of training loop.
4. Function must not be assigned to the variables or passed as an argument.
5. Training loop must not be defined conditionally.

3.2 Rules

3.2.1 Summary

$Summary$	::=	`ModuleSummary` id $\sigma_\top$ tl	(ModuleSummary)
		`FuncSummary` tl	(FuncSummary)
		`ClassSummary` arg	(ClassSummary)
		`ValueSummary` s	(ValueSummary)
arg	::=	$Model \mid \bot$	(Arg)
tl	::=	$GradTape \mid Optimizer \mid \bot$	(TrainingLoop)
$\sigma_\top$	::=	$\sigma \cup \top$	

$\sigma \in \Sigma = Id \xrightarrow{\text{fin}} Summary$ Environment storing mappings from ids to summaries

3.2.2 Training Loop
